

REMARKS

Amended drawings are provided by the Applicant that overcome the drawing objections in the Office Action mailed June 27, 2008.

The partial cross-sectional drawings have been corrected to show regions of cross section and regions not cross-sectioned. Labels have been corrected and cross hatching has been changed to indicate a different type of material for the receiver.

In Figure 1 the one half of the receiver is now shown with cross-hatching. The extraneous text has been deleted from Figures 1, 2, 4 and 6. In particular, the text "Fail-safe Pin" has been deleted from Figure 1; "Force Flow" has been deleted from Figure 2; "Position 1" and "Position 2" has been deleted from Figures 4 and 6; and "Indicator" has been deleted from Figure 6. Additionally, the text "Z-direct" in Figure 1 has been amended to -- Z --.

The other anchorage 52 has been labeled in Figure 1. Cross-hatching has been included on the receiver 5 in Figs. 1, 2, 4 and 5. The double arrowed line in Figure 2 indicates the force K redirected to K and has been labeled correctly (paragraph [0023] of specification). In addition, the horizontal line at the bottom of the cylindrical body has been removed, showing a partial cross sectional view of the cylindrical body 56.

Figure 3 has been amended to correctly illustrate the base 66 having a diameter D greater than the distance A between limbs of the U-shaped clamp 54, and the cross section of the pin 6.

The planiform or dish shaped component is merely recited in the preamble and not the body of the claim. Therefore, this feature is not claimed.

The insertion pin 6 having a screw thread 41 is clearly identified in specification. For example, see paragraph [0020] of the specification further amended by the Preliminary Amendment filed with the original application.

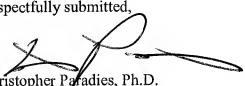

No new matter has been added by any of the amendments.

The Applicant respectfully requests that the Examiner enter the amendments to the drawings.

Dated: January 27, 2009
